

SDECIEICATION

70W Single Output Switching Power Supply

HSG-70 series

- Universal AC input / Full range(up to 305VAC)
- Protections:Short circuit/Over load/Over voltage/Over temperature
- · Built-in active PFC function
- High efficiency up to 90%
- · Cooling by free air convection
- IP65 design for indoor and outdoor installations
- Small and compact size
- High reliability,low cost
- Suitable for LED lighting and moving sign applications
- 3 years warranty

	HSG-70-12	HSG-70-18	HSG-70-24	HSG-70-36	HSG-70-48

- 2. Ripple & noise are measured at 20MHz of bandwidth by using a 12" twisted pair-wire terminated with a 0.1uf & 47uf parallel capacitor.
- 3. Tolerance : includes set up tolerance, line regulation and load regulation.
- 4. Derating may be needed under low input voltage, please check the static characteristics for more details.
 5. Constant current operation region is within 65% ~100% rated output voltage. This is the suitable operation region for LED related applications, but please
- reconfirm special electrical requirements for some specific system design.

 6. The power supply is considered as a component that will be operated in combination with final equipment. Since EMC performance will be affected by the complete installation, the final equipment manufacturers must re-qualify EMC Directive on the complete installation again.

 7. Length of set up time is measured at cold first start. Turning ON/OFF the power supply may lead to increase of the set up time.

 8.To fulfill requirements of the latest ErP regulation for lighting fixtures, this LED power supply can only be used behind a switch without permanently
- connected to the mains.

70W Single Output Switching Power Supply

HSG-70 series

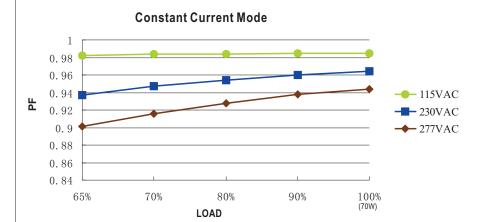

File Name: HSG-70-SPEC 2015-11-02

INPUT VOLTAGE (V) 60Hz

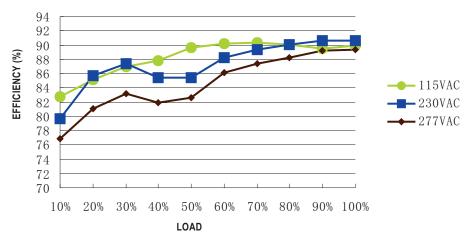

AMBIENT TEMPERATURE (°C)

■ Power Factor Characteristic

■ EFFICIENCY vs LOAD (48V Model)

HSG-70 series possess superior working efficiency that up to 90% can be reached in field applications.

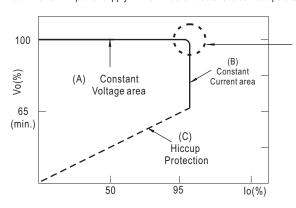

■ DRIVING METHODS OF LED MODULE

There are two major kinds of LED drive method "direct drive" and "with LED driver".

A typical LED power supply may either work in "constant voltage mode (CV) or constant current mode (CC)" to drive the LEDs.

Mean Well's LED power supply with CV+ CC characteristic can be operated at both CV mode (with LED driver, at area (A) and CC mode (direct drive, at area (B).

Typical LED power supply I-V curve

In the constant current region, the highest voltage at the output of the driver depends on the configuration of the end systems.

Should there be any compatibility issues, please contact MEAN WELL.
